

Tattoo Aftercare

Leave bandage on for 12-24 hours. Upon removing your bandage, wash the area with warm water and soap. A soap mild enough for your face is the best thing to use (Dove, Caress, Aveeno, etc.) Allow the tattoo to air dry... DO NOT REBANDAGE!!

IF YOU PURCHASED REDEMPTION CREAM AT THE SHOP USE A SMALL AMOUNT TO MOISTURIZE THE TATTOO 3-4 TIMES A DAY THROUGHOUT THE HEALING PROCESS. OTHERWISE:

For the first 2 days, apply a small amount of BACITRACIN ointment to the tattoo. Only use enough to moisturize the tattoo. You should not see a layer of ointment on your skin. Do this 3 times a day.

After the first 2 days... stop using the Bacitracin and begin using a non-scented moisturizer. We recommend CUREL or AQUAFOR (any non-scented moisturizer is sufficient)

Keep the tattoo CLEAN and DRY while it heals.

A small amount of flaking and itching is normal. DO NOT PICK OR SCRATCH THE TATTOO!!

A small amount of excess pigment may flake off the tattoo... you may notice color in these flakes. THIS IS NORMAL.

NEVER APPLY A&D OINTMENT OR VASELINE TO A HEALING TATTOO. THESE BOTH PROMOTE INFECTION AND DELAY HEALING CAUSING COLORS TO FADE.
